DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-3, 5 and 19 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over JP 1-132642 to Sekisui Plastics Ltd., (hereinafter "Sekisui").

Sekisui discloses foamed beads obtained by steam-foaming a compositions containing polypropylene (PP) and nylon polymer blend. The density, of the beads and cell size of the foamed beads fully correspond to the claimed limitations. See all illustrative examples. It is believed that the particle size also fully correspond to the claimed size. In the alternative, varying the size of the final product (and the original granule), is considered to have been a mere change in size, which is prima facie obvious as per existing case law. The foamed particles are obtained by melt mixing PP (propylene ethylene copolymer having 4.5 % ethylene as per illustrative examples) with various nylon resins (such as Nylon-6 or 11), extruding and granulating the mixture,

dispersing the granulate in water (in the presence of surfactants) and impregnating the granules with butane. The impregnated particles are then expanded by steam. See all illustrative examples, especially comparative example 2, containing only PP copolymer and Nylon 6 polymeric components in 80/20 weight ratio.

The reference does not expressly disclose the open cell percentage of the expanded bead, however, since the expanded beads are obtained from substantially the same composition via substantially identical process as disclosed in illustrative examples of the instant application, it is reasonably believed that the content of open cells in the disclosed expanded beads must inherently correspond to the claimed amounts.

The burden is shifted to the applicants to provide factual evidence to the contrary.
